

iSee Experience

iSee is an app used by isolated students for a virtual reality experience of a classroom. It is very straightforward to use if you have ever played a video game. It became 10x easier to use the platform. Simple controls like ASDW help you move around the space. Space bar for jump. The possibilities are endless with iSee, it could be used for group activities, presentations, games, etc. There are various different areas in iSee, like the Social Area, General Purpose Area, Dynamic Room, Holodeck, Lab Space, Classroom and Lecture Theatre. Students can easily switch areas accordingly.

I personally love using iSee. I started using it in my previous school for group activities and games. It was truly enjoyable and fun to use. When I came to NTSDE, within two months the platform improved massively. New areas were added and there were even more features than there were before I started using it. You could easily share your screen, different websites, memes. iSee has become a fun getaway from other classes and Zoom. The app has a lot of potential and there could be so many new features added to make the app more enjoyable.

iSee could be integrated to other classes too. It would make the class more enjoyable and would get more students involved. If students are required to give a presentation or a speech, iSee would be the perfect environment to do so. Even presenting videos, videos could be easily shared on screens in the area.

I am currently using iSee from all the over in Asia. In Doha, Qatar. It is about 5AM here. iSee really gets my adrenaline running and makes me active for the rest of my classes. – **Hamzah**

My experience with iSee, I like I iSee because it's the one day in a week of school that you don't really work where you can just run around jump on top of each other and try to find places to get out of the map or to get onto things, yeah sometimes iSee crash or you just randomly disconnect but still it's a fun app and it's a one of its kind. – **Jan**

My experience with iSee has been more entertaining than the zoom lessons for school. I have enjoyed interacting with everyone which is easier than in a zoom lesson. iSee is made up of 7 zones, each zone has a different purpose. The social area is the first zone I'm going to talk about, it is where the homeroom class meets up every Thursday. It is where we do most of the lesson, which includes an introduction to what we are going to do this lesson, then doing said thing and then usually we do some sort of game until the lesson ends. The general-purpose hall is the next zone. I haven't really used it, but I'm pretty sure that it is meant for a place to meet with a group and discuss a group assessment or activity to do. The next zone is called the Dynamic Room it has 2 white boards on each side and a glass roof, I can't imagine what the room is for. The holodeck is another zone. The first and only time I went in there all I could see was white. It is a room with one thing, a white board. If it wasn't

there you couldn't easily tell up from down. After the holodeck comes the science lab which is just a lab with about 20 whiteboards that you can put videos on. The seven zones in iSee make for lots of options to learn play and interact with your classmates. In conclusion I like iSee a decent amount, needs some improvements but overall is fun and really interactive. I think it should be transferred over to have it as regular classes instead of zoom lessons. -

Tarquin

My experience in iSee has been pretty good so far. In the beginning it was a bit confusing and weird because I'd never seen or used anything like it, coloured squares with faces on them! It was easy to get the hang of because you just use the arrows to move around, and the general buttons you use like the camera on and off and the mute and unmute button are easy to access. Sharing to the board was hard because it's not that simple and it's a bit glitchy if you don't have a good internet connection. Sometimes you can't move, and it just freezes, but within about 3 seconds it's all good again. I like how when you are close to people you can hear them, and when you aren't near someone you can't hear them. It's as if you are talking to them in person! This feature is handy if you are doing group work and you need to have group discussions. The year 10 class at NTSDE are the first senior students to use iSee in the whole of Northern Territory – we are really lucky! Another good thing about iSee is that you can use it from anywhere, I'm using it from home in Borroloola! A cool feature in iSee is the different rooms you can go in and out of while you are using it. The different rooms have different features which can be used for different things. They would make a pretty good game of hide and seek. If you have awesome teachers like Vanessa and Joel that make iSee funny and enjoyable, then you will have a blast while using it. – **Brooke**
